

SPECIFIC BIOAUGMENTATION PROCESS

Hydrocarbons and propylène glycol treatment in rain water storage.

MycoEpur Airport

MycoEpur composition

Natural microbial consortium :
1 fungus , 1 yeast and 1 bacteria

TARGETS:

Higher degradation of hydrocarbons and propylène glycol.

Hard COD degradation for a better outlet in the river.

MycoEpur utilisation and dosage

MycoEpur is a powder : a liquid suspension must be prepared : 1 dose of powder for 9 dose of water.

Dosage of liquid suspension : / m3 of rain storage lagune, every.....

Injection : the liquid suspension is directly sprayed on the lagune.

RESULTS
